

CORE USER

Repeat-trade SMEs

Food, ingredients, packaging, distribution

TRUST MECHANISM

Sui smart contract escrowProofPay coordinates funds but cannot
withdraw then

SETTLEMENT

Accepted value first

Only exceptions remain protected

Trade with Certainty. Settle on **proof**.

A delivery-linked B2B escrow and settlement platform that lets buyers protect cash, suppliers verify secured payment, and both parties settle accepted value — without freezing the entire trade.

ProofPay turns every purchase order into a programmable settlement agreement. The buyer funds a non-custodial Sui smart contract, the supplier confirms and ships against visible funds, and accepted quantities release automatically while only disputed value remains locked.

TEAM : Chain Reaction

PROTOCOL STATUS

SETTLEMENT HEALTH**92 / 100**

PROTECTED & ON TRACK

70,400 USDC Secured

Active

Nobody wants to **move** first — and the **standoff** has a price.

Buyers won't release cash before goods are verified. Suppliers won't ship before payment is secured. The result: slow trade, frozen invoices, and working capital trapped in limbo on both sides.

BEACHHEAD MARKET

ProofPay is designed for repeat B2B trade where goods are inspected after shipment and neither side wants to move first — food distributors, ingredient suppliers, packaging vendors, and central kitchens across Malaysia and Southeast Asia.

JOBS TO BE DONE :

-  **Buyer :** Secure the order, inspect delivery, release only the value the receiving team actually accepts.
-  **Supplier:** Verify payment before dispatch, prove fulfilment, receive undisputed value quickly.
-  **Both:** Use one shared record instead of reconciling separate screenshots, chats, and spreadsheets.

Buyer / Procurement

FEAR
Paying for missing, damaged, or unacceptable goods

CURRENT WORKAROUND
Delay payment, demand deposits, chase documents

COST
Slower trade, strained supplier relationships

Supplier / Finance

FEAR
Shipping without a reliable payment commitment

CURRENT WORKAROUND
Full prepayment or credit checks

COST
Lost orders, working-capital risk

Receiving Team

FEAR
Blamed for unclear delivery quantities/condition

CURRENT WORKAROUND
Photos, signatures, chat threads

COST
Slower trade, strained supplier relationships

Finance / Operations

FEAR
One exception freezes the full invoice

CURRENT WORKAROUND
Manual partial invoicing, negotiation

COST
Slow settlement, high admin overhead

One purchase order. One enforceable state.

ProofPay turns every purchase order into a programmable settlement agreement. The buyer funds a non-custodial Sui smart contract, the supplier confirms and ships against visible funds, and accepted quantities release automatically while only disputed value remains locked.

ENGINE LOGIC FLOW

- Supplier confirmation happens before funding, closing the ambiguity gap that plagues Slide 3's tools — the buyer only ever funds a version the supplier already agreed to

- Delivery Evidence Anchored**
Delivery evidence is anchored on-chain via cryptographic hash while underlying files stay private and off-chain — integrity is verifiable without exposing commercial data

 **ACCEPTED**
Accepted Value First
Auto-releases instantly

 **EXCEPTION**
Remains Locked
Pending resolution

TRUST MECHANISM

Sui Smart Escrow

ProofPay coordinates funds and rules but holds zero administrator withdrawal path.
Completely non-custodial.

FUNDS LOCKED ON-CHAIN

STRUCTURALLY DIFFERENT (NOT JUST AN ESCROW APP)

- State Machine vs. Static Forms**
Every action advances one shared record, directly eliminating the "three versions of the deal" failure mode diagnosed on Slide 3.
- Milestone-based Partial Release**
Settlement isn't all-or-nothing at final inspection. As delivery proceeds through verification checkpoints, the contract can release value incrementally — so working capital starts flowing before the full order is verified, not just after.

DEMO VIDEO - PROOF**PAY**

BUSINESS MODEL AND MARKET SIZING

How We Earn...

STREAM 1: ESCROW FEE

Who Pays:

Buyer/seller in the trade

What They Get:

What they get: Funds held securely until the goods are confirmed received, isn't sending money into the void, seller isn't shipping without payment secured

Why they pay:

Removes payment/delivery risk in cross-border trade

Price:

1.5%

STREAM 2: FX/CONVERSION FEE

Who Pays:

User converting SUI ↔ fiat

What They Get:

Instant, predictable conversion without needing a separate crypto exchange, bank wire, or manual OTC deal

Why they pay:

Convenience and speed — converting stablecoins to spendable local currency any other way (exchange withdrawal, bank transfer) is slower and often costs more once you add exchange fees and delays

Price:

1.25%

STREAM 3: CARD INTERCHANGE SHARE

Who Pays:

Merchant (via standard network interchange)

What They Get:

What they (the cardholder) get: A working Visa/Mastercard debit card; their USDT balance anywhere, converted automatically — no separate crypto-to-cash step

Why exist revenue

earn a cut of every swipe for driving the volume

Price:

TBC

Total Market Size...

Total Revenue over Operating Cost.

Conservative Case Break-even: Month 4–6

Scaling to Profitability: Phase 3 Unit Economics

Profit rises when both trade volume and average trade value increase. At 2,000 trades × RM55,000, estimated Phase 3 net profit is about RM2.92 million.

A breakdown of the RM ~130k maximum monthly run rate at Phase 3, driven primarily by human capital, platform security, and physical scaling

Stress-Testing the Model: Cash Flow & Runway Scenarios

The model shows cash accelerating after Month 6 as trade volume scales. The percentile range remains wide, so growth assumptions should be validated against real transaction data.

With RM250,000 and no revenue, median runway is about 8.7 months. Cash becomes critical as Phase 3 scaling begins, making early revenue or staged funding essential.

APPENDIX

	A	B	C	D
1	Phase	Product development	Target market and validation	
2	1. Prototype	Build the testnet escrow, AI document matching and partial-dispute flow	Complete one end-to-end live demonstration	
3	2. Closed Pilot	Test SME onboarding, courier evidence, settlement and dispute handling	10 Malaysian SMEs—5 buyers and 5 suppliers in machinery and industrial spare-parts wholesale; 30 trades over 12 weeks	
4	3. Mainnet Lau	Launch audited USDC escrow with KYB, compliance controls and sponsored trans	Convert pilot users into paying customers; focus on fully secured first-time and cross-border trades	
5	4. Scale	Add milestone payments, partial funding and courier/financing-partner integrations	Expand into other manufactured goods and regional trade corridors

Business Model & Financial Projections

APPENDIX

	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T	U	V	W	X	Y
1	TAM / SAM / SOM & Revenue Model																								
2																									
3	Key assumptions — edit the blue cells																								
4	Assumption	Value	Notes																						
5	Average trade value (RM)	55,000	Midpoint of RM10,000–RM100,000 — the sourced band specifically for ‘machinery, industrial components, and medium-to-large orders’ by Malaysian B2B buyers (not just a generic ecrow threshold). Source: https://yellowbees.com.my/guides/alibaba-vs-other-platforms — replace with real pilot data (P1) once available.																						
6	Ecrow fee rate	1.5%	Benchmarked to Ecrow.com listed pricing (0.85%–3.25% by deal size); see row 30																						
7	FX / stablecoin conversion spread	1.25%	Benchmarked to Crypto.com (~1–2%) and Wise (1.5–2.5%) crypto-to-fiat spreads; undercuts Coinbase (3%)																						
8	USD/MYR FX rate	4.10	Approximate rate used to convert USD-denominated TAM sources to RM — update to spot rate before presenting																						
9	FX/card revenue starts from phase	(P2)	Assumption: pilot (P1) is ecrow-only; wallet/card revenue begins at mainnet launch (P2) per your roadmap tab. Edit if your card launches later.																						
10																									
11	Trade volume — from your own roadmap cost sheet																								
12	Phase	Monthly trades	Source in this workbook																						
13	P1 – Closed Pilot	100	P1-Closed PilotTB11, Gemini API line item (“100 trades”)																						
14	P2 – Mainnet Commercial Launch	500	P2-Mainnet Commercial LaunchTB, Gemini API line item (“500 trades”)																						
15	P3 – Scale	2,000	P3-ScaleTB, Gemini API line item (“2,000 trades”)																						
16																									
17	Market sizing — TAM (Total Addressable Market)																								
18	Metric	Value	Unit	Value (RM bn equiv.)	Source	Full source URL	Notes																		
19	Global cross-border SME trade-finance market (2023)	47.2	USD billion		193.5	Sourced	https://www.intelmarketresearch.com/cross-border-trade-finance-market-size-share-growth-trends-forecast-2023-2030	Letters of credit, guarantees, ecrow-type instruments SMEs use for cross-border trade; grows to \$89.5bn by 2034 (7.3% CAGR). CAVEAT: this page also shows an inconsistent FAO figure (\$52.3bn/2024); treat as directional market-sizing, not precise.																	
20	Cumulative stablecoin-linked card transaction value	7.8	USD billion		32.0	Sourced	https://www.speak.money/research/stablecoin-debit-card-revenue-projections-2023-2028	Card-layer TAM; monthly crypto card volumes grew ~230% YoY through May 2028																	
21	Total TAM (RM billion equivalent)				225.5																				
22																									
23	Market sizing — SAM (Serviceable Addressable Market: Malaysia machinery/spare-parts cross-border trade)																								
24	Metric	Value (RM bn)	Source	Calculation		Full source URL	Notes																		
25	Malaysia machinery, equipment & parts exports (see Appendix A)	89.04	Sourced		89.04	https://www.mal.gov.my/mal/en/actual-full-year-2024-export-value-for-machinery-equipment-and-parts	Actual full-year 2024 export value for machinery, equipment & parts (+20.8% vs 2023), reported directly by MATRADE — no annualization needed																		
26	Estimated machinery/parts import flow (comparable)	89.04	Estimated		89.04	https://www.mal.gov.my/mal/en/matrade-consistently-lists-machinery-equipment-and-parts-among-malaysia-s-top-imports-e.g.-from-china-the-us-and-the-eu-but-does-not-publish-a-standalone-annual-rm-total-for-this-category	MATRADE consistently lists machinery, equipment & parts among Malaysia’s top imports (e.g. from China, the US and the EU) but does not publish a standalone annual RM total for this category — treated here as comparable in magnitude to exports. Replace with an exact figure if you obtain one from MATRADE/DITP.																		
27																									
28	Total SAM — Low (export flow only, fully sourced)				89.04																				
29	Total SAM — High (export + estimated import flow)				178.08																				
30																									
31	SOM — bottom-up revenue projection from your own roadmap trade volumes																								
32	Phase	Monthly trades	Avg trade value (RM)	Monthly GMV (RM)	Ecrow revenue (RM/mo)	FX/conversion revenue (RM/mo)	Total revenue (RM/mo)	Annualized revenue (RM/yr)																	
33	P1 – Closed Pilot	100	55,000	5,500,000	82,500	0	82,500	990,000																	
34	P2 – Mainnet Commercial Launch	500	55,000	27,500,000	412,500	343,750	756,250	9,075,000																	
35	P3 – Scale	2,000	55,000	110,000,000	1,850,000	1,375,000	3,025,000	36,300,000																	
36	Note: FX/conversion revenue is modeled as starting at the phase and in 2Q (default P2), since the pilot (P1) is ecrow-only per your roadmap tab.																								
37																									
38	Sanity check — SOM as % of SAM																								
39	P3 (Scale) annual GMV (RM)	1,320,000,000																							
40	P3 (Scale) annual GMV as % of Total SAM — Low	1.91%																							
41	P3 (Scale) annual GMV as % of Total SAM — High	0.98%																							
42	A sub-2% share of even the export-only SAM at full Phase-3 volume is a realistic, non-herculean target — useful for investor conversations.																								
43

Stablecoin Debit Cards in 2026: From Crypto Perk to Payment Standard

How stablecoin-funded debit cards evolved from niche crypto products to mainstream payment tools, and what it means for card networks.

bcNeutron

Jul 6, 2026

Two years ago, a stablecoin debit card was a novelty: a crypto-native perk that let early adopters spend USDC at coffee shops while earning token rewards. In 2026, the category has crossed into something more consequential. Monthly crypto card transaction volumes have climbed roughly 230% year over year, reaching a cumulative \$7.8 billion through May 2026. Visa now runs more than 130 stablecoin-linked card programs across over fifty countries. Mastercard acquired stablecoin infrastructure provider BVNK for up to \$1.8 billion. And on June 30, 2026, a consortium of over 140 companies including Visa, Mastercard, Coinbase, BlackRock, and Stripe announced Open USD: a jointly issued stablecoin designed to compete directly with Circle and Tether.

The stablecoin debit card is no longer a crypto perk. It is becoming a payment standard.

Trade Performance for Year 2024 and December 2024

MALAYSIA'S 2024 TRADE INCREASED 9.2% YEAR-ON-YEAR, RECORDING THE HIGHEST VALUE EVER AT RM2.879 TRILLION

Outstanding Trade Performance in 2024, Setting New Record Highs

Malaysia's trade performance in 2024 continued to deliver outstanding performance, recording another milestone with trade reaching new heights. Trade, exports and imports rebounded in 2024 with trade amounting to RM2.879 trillion, an increase of 9.2% year-on-year (y-o-y), surpassing the RM2 trillion mark for four consecutive years. Similarly, exports exceeded RM1 trillion for four consecutive years, rising 5.7% to RM1.508 trillion. This achievement accounted for 87.2% of the target set for 2025 exports under the Mid-term Review of the Twelfth Malaysia Plan (RMKe-12). Meanwhile, imports were up by 13.2% y-o-y to RM1.371 trillion, crossing the RM1 trillion mark for the third successive year. This exceptional performance has resulted in a trade surplus of RM136.88 billion, for the 27th consecutive year since 1998.

Exports to major trading partners, namely ASEAN, the United States (US), the European Union (EU) and Taiwan increased, with exports to the US and Taiwan reaching an all-time high. Taiwan officially became Malaysia's fourth largest trading partner, reflecting the strengthening bilateral trade partnerships and growing trade opportunities.

Notably, Free Trade Agreements (FTAs) have played a pivotal role in providing local businesses with greater access to international markets. Exports to FTA markets expanded this year, reversing the contraction seen in 2023. Canada was one of those export destinations which recorded growth, driven by higher demand for electrical and electronic (E&E) products, while exports to Turkiye and Mexico soared to a new record high, fuelled by the increased shipments of iron and steel products as well as chemicals and chemical products, respectively.

Diversification strategies targeting emerging markets have also played an equally important role in contributing to export growth, particularly to countries such as Bangladesh, Costa Rica, Egypt, Nigeria, Angola, Ethiopia, Algeria, Togo, Libya and notably Kenya, Oman and Namibia which rose to a new record level.

In terms of products, export expansion in 2024 were driven by strong performance in both manufactured and agriculture products. This growth was led by increased shipments of E&E products, machinery, equipment and parts, processed food as well as optical and scientific equipment which had recorded the highest value ever. Palm oil and palm oil-based agriculture products, manufactures of metal and rubber products also contributed to the expansion. Additionally, exports of E&E products along with machinery, equipment and parts posted increases of more than RM10 billion, respectively.
